RACING CAR TIRES ZR

Color Smoke Tires are available.

CENTER GROOVES

Two center grooves were carefully designed from data gathered during testing to quickly and efficiently disperse water for improved wet traction.

VARIABLE GROOVES

There are two wing grooves at outside wall with different lengths and angle. Longer groove assists in water channeling and enhances cornering performance and aids in self-cleaning. Shorter groove enhances directional stability. Lightning grooves enhances lateral traction for maximum side bite.

SOLID CENTER RIB

The addition of a solid center rib improves traction under acceleration by providing a consistent contact patch with the road.

SIDE DIMPLES

Small dimples allow the drivers to easily check tire wear and the effective contact patch area.
